

The Information Standard

PAPAA has successfully been re-accredited under the NHS England Information Standard Scheme (TIS). Organisations that achieve membership of the Information Standard have demonstrated their commitment to trustworthy health and care information as well as providing assurances of the quality of their internal processes.

Treatment update

We have recently updated our *Treatments for Psoriasis: An overview*. The leaflet includes information about all the NHS available therapies and was reviewed by a leading dermatology nurse practitioner. A lay group of people affected by psoriasis have also provided key input and reviewed the leaflet, which forms part of the process under the Information Standard scheme.

Psoriasis drug approved

Dimethyl fumarate for treating moderate to severe plaque psoriasis has been recommended by the National Institute for Health and Care Excellence(NICE). In the Final Appraisal Determination (FAD) the committee said:

"Clinical trial results showed that dimethyl fumarate improves severe psoriasis more than placebo but, when compared indirectly, it is less effective than systemic biological therapies and apremilast."
